

# CHRISTMAS TREES GRADES

## GRADE PARTICULARS

- **Premium Grade:** Dense and/or typically uniform on no less than three sides, with minor imperfections.
- **No. 1 Grade:** Medium density, uniform on three sides, with minor imperfections, stem partially visible.
- **Standard Grade:** Lighter in density & colour, nice on two plus sides with visible gaps & imperfections, stem is sometimes visible.
- **Natural Grade:** Open tree with space between branches, nice tree has a natural well formed look with visible stem.

## SIZE OF TREES

- **CANADIAN STANDARDS** Measured by height and sized from the ground to a midway point between the tip of the leader and the uppermost whorl (group of branches).
- **USA STANDARDS** Measures the entire length of the tree, from the butt to the tip of the leader (top most branch).

## CONSIDERATIONS

- Most trees we provide are produced either in our plantations or in other bitterly cold regions of Canada. A small portion originates in the USA, such as some Pine and Fir. This variance in standards may result in marginal differences in actual tree height.

**Legislature Tree**  
**Balsam Fir**
